

# BRED FOR STRENGTH, SPEED AND AGILITY

Our unique approach to training large corporations to become unstoppable, using test automation.

Brought to you by Arch DevOps

# FIGHTING WITH HONOR

Determined to win  
gracefully

We see this happen all the time.

Large corporations can't release software as fast as they want. Small startups eat up market share by responding faster.

These days, raw size isn't enough to compete. **strength**, **speed** and **agility** are all required to compete with everybody else who wants to "move fast and break things".

Arch DevOps helps large corporations improve in all three areas, in a unique way: by getting a handle on **test automation**.

With the right solution in place, multi-million and multi-billion dollar companies become a force to be reckoned with.

If that's you, keep reading to find out how this approach helps breed companies that can compete.

# IS TWO OUT OF THREE GOOD ENOUGH?

Nope and here's why.

Let's say you have **Strength** plus **Speed**: Once you decide to go in a direction, there's no stopping you. But if the needs of the market change, can you course correct? Probably not. That's where **Agility** comes in.

But what if you have **Strength** plus **Agility**: If you're strong and can change direction quickly, that's great, but getting to your destination quickly is key. If someone pushed you out of the ring by getting there faster, they win the match.

You have **Strength** on your side already in terms of budget, domain knowledge and people power. Here's how we add Speed and Agility to the mix.

# CUSTOM SOLUTIONS THAT FIT YOU

## Using the A-B-C methodology

Our proprietary full-spectrum approach comes in three parts: **Assess**, **Build** and **Coach**

During the **Assess** phase, we identify the strengths, weaknesses, experience and domain knowledge of your team, along with future goals, team loadout and markets you want to get into.

That gives us what we need for the **Build** phase, where we craft a solution usable by the highest number of people, with the lowest amount of maintenance, and the best ability to extend later, because tests are written in plain English.

Finally, during the **Coach** phase, we create custom material to help onboard people now and in the future, along with working alongside to get everyone ramped up quickly.

# STARING DOWN THE COMPETITION

Ain't nobody pushing you around now.

Once we're done, you'll have everything you need:

- QA/Dev/BA all able to contribute to test automation when needed
- Full visibility into what's being tested
- Fast turnaround to create or update tests when the product changes
- A safety net to help catch bugs earlier
- The ability to make quick code changes which can deploy to your customers faster.

**Strength. Speed. Agility.** We'll help you get it.
